

Skin Protect

*Do you want to protect your skin from drying out?
Do you want to hide your skin from sun and wind?
Keep your skin looking young and supple!*

Ordinary sunscreens contains ingredients that block or filter out UVA & UVB radiation.

We think different and now give your skin cells the support to cope, protect and repair themselves from UV radiation, we also use more modern UVA & UVB filters that can also scavenge the free radicals that causes the skin to age.

Ectoin

- Ectoin supports the cell's protective and repair mechanism. The cell synthesize Heat Shock Proteins (HSP) two to three times faster. This helps cells to cope with the stress caused by UV radiation, heat and other chemical and physical factors.
- Langerhans cells in epidermis play a critical role in skin's immune system, they are however susceptible to UV radiation, Ectoin protects these cells over a longer period of time.
- Solar radiation cause irreversible damage to cells and creates Sun Burn Cells. Ectoin significantly reduce Sun Burn Cells from forming, and ultimately reduce UV radiation-induced skin aging.

Microfine titanium dioxide coated with manganese dioxide

- **Modern transparent broad spectrum inorganic UVA/UVB filter**
- **Free Radical scavanger**
- **Skin toned cream**
- **First radical defence line in skin protection**
